#### NOTIFICATION OF ELECTION

(PCT Rule 61.2)

To:

Assistant Commissioner for Patents United States Patent and Trademark Office Box PCT Washington, D.C.20231 ETATS-UNIS D'AMERIQUE

in its capacity as elected Office

Date of mailing (day/month/year)	
29 September 2000 (29.09.00)	
International application No.	

PCT/GB00/00268

International filing date (day/month/year)

31 January 2000 (31.01.00)

Applicant's or agent's file reference 297

Priority date (day/month/year) 01 February 1999 (01.02.99)

# Applicant KATHIRGAMANATHAN, Poopathy

1.	The designated Office is hereby notified of its election made:
	X in the demand filed with the International Preliminary Examining Authority on:
	30 August 2000 (30.08.00)
	in a notice effecting later election filed with the International Bureau on:
2.	The election X was
	was not
	made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

IMPORTANT NOTIFICATION

01/02/1999

Applicant

SOUTH BANK UNIVERSITY ENTERPRISES LTD et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

2. Citations and explanations see separate sheet

### VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted: see separate sheet

### VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made: see separate sheet

### INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

### 1) Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1.1) Reference is made to the following documents:

D1: Acta Crystallogr., Sect. B (1982), B38(8), 2155-9

D2: WO-A-9855561

D3: WO-A-9858037

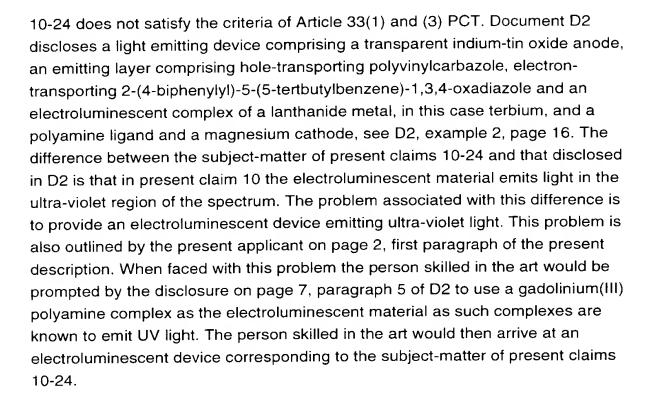

D4: Chemical Physics Letters,nl,amsterdam (0000), 5-6(276), 435-440

D5: Advanced Materials, de, vch Verlagsgesellschaft, Weinheim (01-11-1995),

7(11), 900-903

- 1.2) Document D1 discloses the compound Na[Gd(edta)] see Table 1, page 2156. Therefore the subject-matter of present claims 1 to 5 is not novel and does not satisfy the criteria of Article 33(1) and (2) PCT.
- 1.3) Document D2 discloses two gadolinium(III) complexes with polyamine ligands which emit light in the UV region, see examples 9 and 16 and page 7, paragraph 5, where it is stated that complexes of gadolinium provide UV radiation. Therefore the subject-matter of present claims 1 and 2 is not novel and does not satisfy the criteria of Article 33(1) and (2) PCT.
- 1.4) Document D4 discloses a gadolinium(III) complex of a pyrazolylborate polyamine ligand which emits light in the range 400nm to 500nm with a prominent peak at 450nm, see D4, Figure 1 and Figure 3. A comparison of this emission with that of Gd[Eu(etda)]<sub>3</sub> which as shown in Figure 2 of the present application emits over a range of 400nm to 500nm leads to the conclusion that if the latter compound emits light in the UV region then so must the former compound of the prior art. Therefore the subject-matter of present claims 1 and 2 is not novel over document D4 and so does not satisfy the criteria of Article 33(1) and (2) PCT. See also paragraph 3.2 below regarding the clarity of present claim 1.
- 1.5) The subject-matter of present claims 10-24 does not involve an inventive step over the closest prior art document D2, therefore the the subject-matter of claims

- 1.6) The additional technical features of claims 12, 17, 23 and 24 are either well known in the art or fall within the knowledge and ability of the skilled person. Thus their inclusion in an electroluminescent device is considered obvious. With reference to the subject-matter of claim 12, see D3, claim 11, with reference to the subjectmatter of claim 17, see D3, claim 16 and with reference to the subject-matter of claim 23, see D3, claim 25.
- 1.7) The subject-matter of present claims 6 to 9 satisfy the criteria of Article 33(1) (2) and (3) PCT regarding novelty and inventive step as their subject-matter, a material comprising a complex of a transition metal, lanthanide or actinide and the ligand edta, dcta, dtpa or ttha in which the complex is in the form of a transition metal, lanthanide or actinide salt is not disclosed in or made obvious by the prior art.
- 1.8) The subject-matter of present claims 1 to 24 satisfies the criteria of Article 33(4), the electroluminescent material and devices having industrial application in the field of light emitting devices.

### INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

Certain defects in the international application

2.1) Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1, D4 and D5 is not mentioned in the description, nor are these documents identified therein.

### 3) Re Item VIII

Certain observations on the international application

- 3.1) Present claim 1 is directed to complexes of transition metals, lanthanides or actinides and polyamine ligands, the description provides only two examples of such complexes, both being lanthanides. Clearly, contrary to Article 6 PCT, the description does not fully support a claim of such broad scope as present claim 1. Related to this point is the question as to whether the description, which provides only two examples of electroluminescent materials, both within a very limited range of those claimed, and further provides no examples of electroluminescent devices, can be considered to disclose the invention in a manner sufficiently clear and complete for the claimed invention to be carried out by a person skilled in the art, as is required by Article 5 PCT.
- 3.2) Ultraviolet light is defined as being light of a wavelength below 400nm, see for example D5, page 901, column 1, paragraph 2. As can be seen in Figure 2 of the present application the compound Gd[Eu(etda)]3 emits light principally outside this range, i.e. its most intense emission falls between 400nm and 500nm, therefore the compound Gd[Eu(etda)]3 of example 2 is not an embodiment according to the present claims. This inconsistency between the claims and the description leads to doubt concerning the matter for which protection is sought, thereby rendering the claims unclear (Article 6 PCT).
- 3.3) The subject matter of claim 7 is not clear since the claim describes a salt Ln'[Ln(edta)]<sub>3</sub> in which Ln is stated to be a transition metal, lanthanide or actinide. The term Ln is generally accepted to refer only to lanthanides and the suggestion that it may refer to some other group of elements renders the claim unclear, contrary to Article 6 PCT. The same statement occurs on page 3, line 13 of the

### INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

description. It is also noted that such a use of the term Ln is contrary to Rule 10.1(e) PCT.

- 3.4) In claim 3 and on page 2, line 23 ethylenediamine tetraacetic acid (edta) is incorrectly refered to as ethylene diamine tetramine, this leads to a lack of clarity of the claims contrary to Article 6 PCT.
- 3.5) In claims 16, 21 and 22 and on page 6, line 2 what is clearly the cathode is incorrectly refered to as the anode, leading to a lack of clarity of the claims contrary to Article 6 PCT.
- 3.6) The dependency of a number of the claims gives rise to a lack of clarity of the claims as a whole contrary to Article 6 PCT, the claims are as follows;
- 3.7.1) Claim 9 indicates that it is dependent on claim 5 although the subject-matter of claim 9 is a gadolinium salt and claim 5 is restricted to only alkali metal salts.
- 3.7.2) Claim 11 indicates that in addition to being dependent on claim 10 it is also dependent on claims 1 to 9 this renders the subject-matter of the claims unclear since dependent claim 11 is directed to an electroluminescent device whereas claims 1 to 9 are for an electroluminescent material.
- 3.8) The term "aromatic amine complex" in claim 14 is not clear since it is obvious from the description, page 5, lines 7 to 9, and from dependent claim 15 that the compounds refered to are aromatic amines and not complexes of aromatic amines.
- 3.9) Claims 19 and 20 are directed to electroluminescent devices comprising oxadiazoles, contrary to Article 5 PCT there is no support in the description for such devices since there is no mention in the description of oxadiazoles.
- 3.10)In order to expediate the procedure a number of other errors, typographical mistakes etc which occur in the description are indicated below:
- 3.10.1)On page 1, lines 15 and 17, the year 1990 is incorrectly written as 1990 i.e. using

### International application No. PCT/GB00/00268

I rather than 1.

- 3.10.2)On page 3 the structure of DCTA is incorrect, lacking a CH<sub>2</sub> group adjacent to a nitrogen.
- 3.10.3)On page 4, line 9, the letter s has been omitted from the word includes.
- 3.10.4)On page 4, line 28, there is an incorrectly placed semicolon.
- 3.10.5)On page 5, line 8, the letters I,I' have been used in the formula where the numbers 1,1' should be used.
- 3.10.7)On page 7, line 4, the brackets which are opened are not closed.
